796 Chapter 12 Rational Equations and Functions
OPPOSITES When simplifying a rational expression, look for factors that are opposites of each other. For example, $x^2 - 1$ and $1 - x^2$ are opposites, because $x^2 - 1 = -1(x^2 - 1) = -(1 - x^2)$. Simplify $x^2 - 2$

Math Men

Here's how you can simplify a cubed radical: 1) Inspect the radicand for a cubed factor: 8, 27, 64, 125, and so on. 2) Split the radicand into 2 parts. 3) Remove (the root of) the cubed factor. For example: Simplify: $\sqrt[3]{3135000}$

$$(6x + 12) / (4 - x) \cdot \dots$$

Simplify: $\sqrt[3]{125} \sqrt[2]{3} \sqrt[2]{125} \sqrt[2]{3} \sqrt[2]{16} - 3 \sqrt[2]{16} - 3 \sqrt[2]{32} - 2 \sqrt[2]{5} \cdot \sqrt[2]{32} - 2 \sqrt[2]{5}$. We will rewrite the expression as a radical first using the definition, $a^{m/n} = (a^n)^{m/n}$. $a^{m/n} = (a^n)^{m/n}$. This form lets us take the root first and so we keep the numbers in the radicand smaller than if we used the other form.
