Vesperidae - Wikipedia

The longhorn beetles (Cerambycidae; also known as long-horned or longicorns) are a large family of beetles, with over 26,000 species described, slightly more than half from the Eastern Hemisphere. Most species are characterized by extremely long antennae, which are often as long as or longer than the beetle's body. In various members of the family, however, the antennae are quite short (e.g ...
