Principles Of Geology Charles Lyell

Principles of Geology: being an attempt to explain the former changes of the Earth's surface, by reference to causes now in operation is a book by the Scottish geologist Charles Lyell that was first published in 3 volumes from 1830–1833. Lyell used the theory of Uniformitarianism to describe how the Earth's surface was changing over time. This theory was in direct contrast to the geological theory of Catastrophism. Many individuals believed in catastrophism to allow room for religious ...

Principles of Geology - Wikipedia

Charles Lyell's Principles of Geology (1830-33) sought to explain the geological state of the modern Earth by considering the long-term effects of observable natural phenomena. Written with clarity and a dazzling intellectual passion, it is both a seminal work of modern geology and a compelling precursor to Darwinism, exploring the evidence for radical changes in climate and geography across the ages and speculating on the progressive development of life.

In Principles of Geology, 3 vol. (1830-33), Scottish geologist Sir Charles Lyell deciphered Earth's history by employing Huttonian principles and made available a host of new geologic evidence supporting the view that physical laws are permanent and that any form of supernaturalism could be rejected.

Principles of Geology | work by Lyell | Britannica

Sir Charles Lyell, 1st Baronet, FRS was a Scottish geologist who demonstrated the power of known natural causes in explaining Earth's history. He is best known as the author of Principles of Geology, which presented to a wide public audience the idea that Earth was shaped by the same natural processes still in operation today, operating at similar intensities. The philosopher William Whewell termed this gradualistic view "uniformitarianism" and contrasted it with catastrophism, which had been ch

Lyell's "Principles of Geology, Volume 1" is one of a few references I'm collecting to learn more about this "old school" geology. Pirsson's "A Text-Book of Geology. Part 1-Physical Geology" (1915) is another landmark reference; Hutton's "Theory Of The Earth" (1788) is another. Lyell's (1830) bridges the gap between those other two.
